DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-6, drawn to data acquisition and control of machinery for digitization of work processes over wireless communication network, classified in class 700, subclass 287.

II. Claims 7-12, drawn to non-speech ambient background noise elimination method, classified in class 704, subclass 226.

The inventions are distinct from each other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because controlling a machinery over a wireless communication network does not necessarily require the elimination of non-speech ambient background noise. The subcombination has separate utility such as eliminating or canceling background noise in any network, not necessarily a wireless network.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or

Art Unit: 2626

divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to William G. Niessen, Reg No. 29,683, on 06/15/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.
